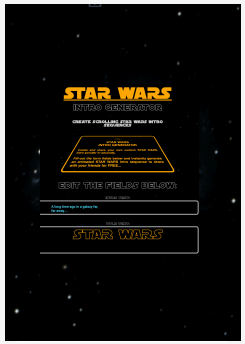
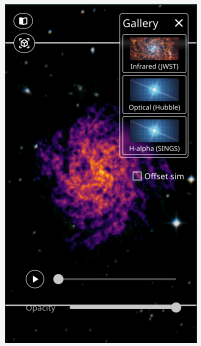
Intro/Guide





A long time ago, in a Galaxy far, far, away... (just like stars wars, blue font, not scrolling)

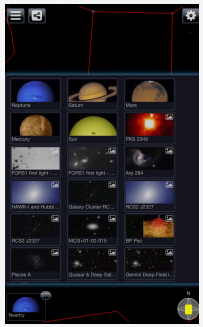
Welcome to the far away "Phantom Galaxy."
On this device, you can investigate the Phantom's secrets. Visuals show what the Phantom looked like at just one moment time 32 million years ago. Clever astronomers use many wavelenghts and telescopes to reveal the Phantom's inner secrets.
But only simulators can provide you with 3D, moving views of the billion-year-long drama unfolding in the Phantom.

after the scroll:

we work through the gallery, with the images changing across, when it says "visuals".

it lands on the initial view, with the simulated view.

the user can switch between Sim & real, will have show in 3D view button



2D view
